

Sequence Diagrams

Included in this document are three sequence diagrams that outline how the CampusSafe application generally functions. The CampusSafe application is split up here into three main systems. The login system, which handles creating accounts, logging in, and logging out. The report incident system, which handles submission of incident reports and receiving of notifications among other features. And lastly, the safety post system, which handles the viewing of safety posts by users, and the creating and deleting of posts by admins. All three of these systems are shown below.

Login System

Report Incident System

Safety Post System
