

State Diagram for CampusSafe project

This state diagram illustrates the flow of interactions within the CampusSafe application, divided into two primary roles: **User** and **Admin**. Users start by logging in, after which they can create incident reports, view alert histories, adjust notification preferences, and access safety resources. Each action returns the user to the home state, maintaining a central point for navigation. Admins have additional capabilities, such as managing alerts, reviewing incident reports, and posting safety resources. Clear transitions guide users and admins through these actions, with a logout state to end sessions.
